

WATER WATCH REPORT

April 29, 2024

Supply Reservoir Contents

Reservoir	Capacity		Current Usable Contents (acre-feet)	Percent Full		
	(acre-feet)			Current	Last	Historical
	Total	Usable	Year		Median	
Antero	20,122	20,067	20,021	100%	101%	99%
Eleven Mile	97,779	97,779	100,140	102%	102%	102%
Cheesman	79,064	79,064	77,449	98%	83%	90%
Marston	19,108	13,133	6,234	47%	55%	71%
Strontia Springs	7,863	7,163	6,300	88%	87%	94%
Chatfield	28,709	12,415	12,415	100%	95%	93%
Dillon	257,304	249,095	214,000	86%	78%	85%
Gross*	41,811	29,811	7,111	24%	16%	23%
Ralston	10,776	7,276	5,430	75%	81%	68%
Meadow Creek	5,370	4,520	-	0%	0%	12%
Total	567,906	520,323	449,099	86%	80%	79%

*Gross Reservoir storage is limited to 29,938 acre feet in total storage during construction activities. The percent full figures are based on the normal usable capacity of 29,811 acre feet.

Daily Use

Supply Reservoir Contents

Acre-Feet

Note: Denver Water forecasts seasonal reservoir storage contents under dry future weather, normal future weather and wet future weather scenarios.

Gross Reservoir storage is limited to 29,938 acre feet in total storage during construction activities. The percent full figures are based on the normal usable capacity of 29,811 acre feet.

April Precipitation

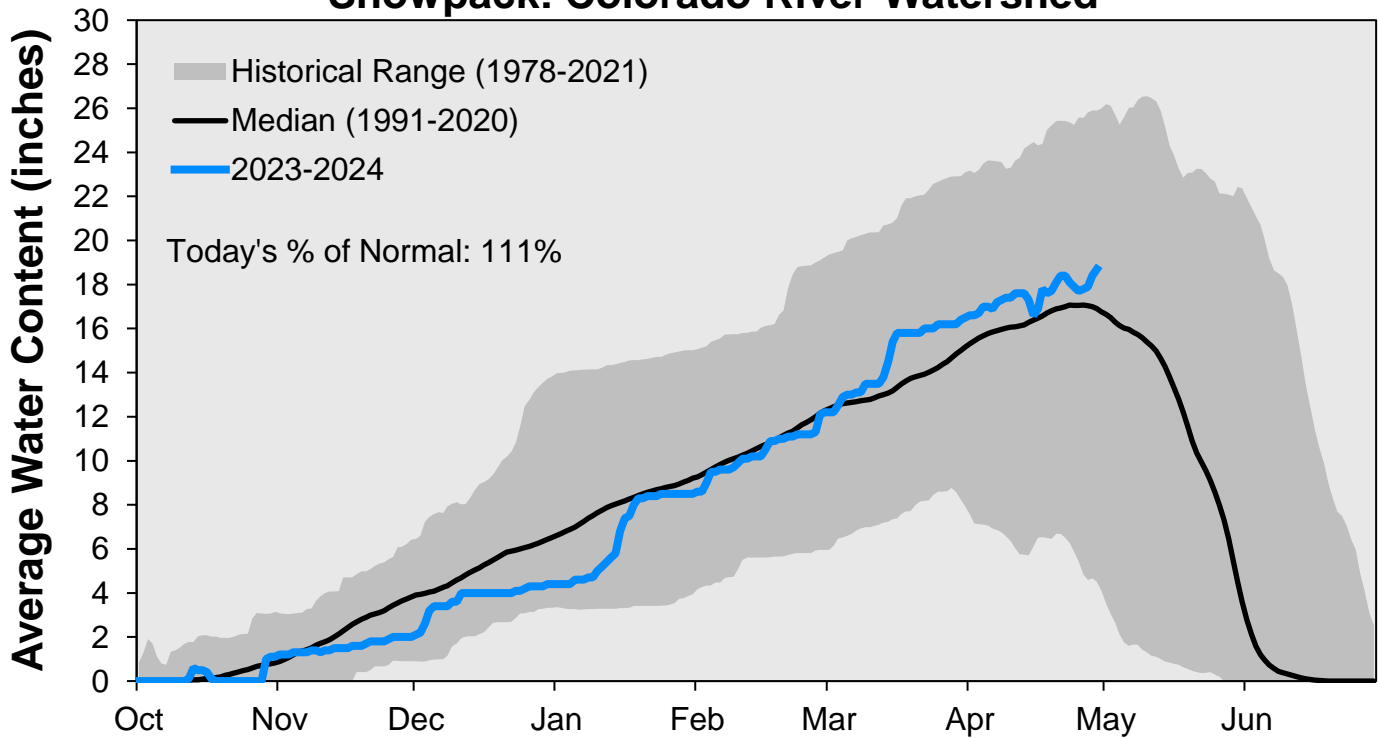

Snowpack: South Platte River Watershed

Data are from the 7 SNOTEL stations above Denver Water's Upper South Platte diversion facilities.

Snowpack: Colorado River Watershed

Data are from the 9 SNOTEL stations above Denver Water's Upper Colorado diversion facilities.

Cumulative Precipitation: South Platte River

Cumulative Precipitation: Colorado River

Data are from the 7 SNOTEL stations above Denver Water's Upper Colorado diversion facilities.

2024 Water Use and Weather Conditions

April 29, 2024

Denver Water Use and Reservoir Contents 2024													
	Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec	YTD-Avg
Predicted End-of-Month Supply Reservoir Contents (Full = 520,323 AF)	452,800												
Actual End-of-Month Supply Reservoir Contents (AF)	437,644	433,227	435,044										
Actual % Full	84%	84%	84%										
Historical Median % Full	81%	80%	79%	79%	88%	98%	95%	92%	88%	85%	84%	83%	
2024 Expected Daily Use (MG)	105	105	104	120	190	267	312	304	277	170	111	105	108
Actual Daily Use (MG)	1	97	111	101	103								
	2	105	104	103	106								
	3	93	95	102	112								
	4	103	112	110	117								
	5	105	109	103	112								
	6	102	108	103	104								
	7	107	109	101	109								
	8	103	108	96	115								
	9	106	108	106	121								
D	10	109	108	100	126								
A	11	98	106	109	125

	28	113	107	98	120								
	29	109	106	99									
	30	111		98									
	31	112		100									
Monthly Average	110	106	100	123									110
% of 2023 Expected Daily Use	105%	101%	97%	102%									101%

Notes: 1) "AF" denotes acre-feet. "MG" denotes million gallons. 2) Expected Daily Use is based on historical use with normal weather conditions. 3) The predicted end-of-month supply reservoir contents figures assume normal weather after April 8th, 2024. 4) The differences between predicted and actual end-of-month supply reservoir contents are the result of normal estimation error of daily use, supply, evaporation, carriage losses and raw water deliveries. 5) Predicted supply reservoir contents last updated on April 8th, 2024. 6) Daily water figures are subject to change.

Lake Powell Report*

Colorado River Above Lake Powell Snowpack

Lake Powell Elevation (2001-Current)

* Denver Water gets half of its water supply from the Colorado River and closely monitors conditions at Lake Powell and within the greater Colorado River Basin.
