

WATER WATCH REPORT

June 17, 2024

Supply Reservoir Contents

Reservoir	Capacity		Current Usable Contents (acre-feet)	Percent Full		
	(acre-feet)			Current	Last Year	Historical Median
	Total	Usable				
Antero	20,122	20,067	20,064	100%	100%	100%
Eleven Mile	97,779	97,779	103,128	105%	102%	102%
Cheesman	79,064	79,064	79,598	101%	101%	97%
Marston	19,108	13,133	8,948	68%	71%	77%
Strontia Springs	7,863	7,163	7,346	103%	94%	94%
Chatfield	28,709	12,415	12,396	100%	100%	86%
Dillon	257,304	249,095	241,134	97%	101%	98%
Gross*	41,811	29,811	16,141	54%	53%	82%
Ralston	10,776	7,276	6,894	95%	96%	90%
Meadow Creek	5,370	4,520	4,004	89%	101%	68%
Total	567,906	520,323	499,653	96%	97%	93%

*Gross Reservoir storage is limited to 29,938 acre feet in total storage during construction activities. The percent full figures are based on the normal usable capacity of 29,811 acre feet.

Daily Use

Supply Reservoir Contents

Acre-Feet

Note: Denver Water forecasts seasonal reservoir storage contents under dry future weather, normal future weather and wet future weather scenarios.

Gross Reservoir storage is limited to 29,938 acre feet in total storage during construction activities. The percent full figures are based on the normal usable capacity of 29,811 acre feet.

June Precipitation

Snowpack: South Platte River Watershed

Data are from the 7 SNOTEL stations above Denver Water's Upper South Platte diversion facilities.

Snowpack: Colorado River Watershed

Data are from the 9 SNOTEL stations above Denver Water's Upper Colorado diversion facilities.

Cumulative Precipitation: South Platte River

Cumulative Precipitation: Colorado River

% of 2024 Expected Daily Use	105%	101%	97%	103%	93%	104%							100%

Notes: 1) "AF" denotes acre-feet. "MG" denotes million gallons. 2) Expected Daily Use is based on historical use with normal weather conditions. 3) The predicted end-of-month supply reservoir contents figures assume normal weather after June 3rd, 2024. 4) The differences between predicted and actual end-of-month supply reservoir contents are the result of normal estimation error of daily use, supply, evaporation, carriage losses and raw water deliveries. 5) Predicted supply reservoir contents last updated on June 3rd, 2024. 6) Daily water figures are subject to change.

Lake Powell Report*

Colorado River Above Lake Powell Snowpack

Lake Powell Elevation (2001-Current)

* Denver Water gets half of its water supply from the Colorado River and closely monitors conditions at Lake Powell and within the greater Colorado River Basin.
