

WATER WATCH REPORT

August 26, 2024

Supply Reservoir Contents

Reservoir	Capacity		Current Usable Contents (acre-feet)	Percent Full		
	(acre-feet)			Current	Last	Historical
	Total	Usable	Year		Median	
Antero	20,122	20,067	17,688	88%	100%	100%
Eleven Mile	97,779	97,779	100,692	103%	102%	102%
Cheesman	79,064	79,064	76,658	97%	97%	95%
Marston	19,108	13,133	10,704	82%	73%	63%
Strontia Springs	7,863	7,163	6,130	86%	88%	93%
Chatfield	28,709	12,415	6,268	50%	92%	57%
Dillon	257,304	249,095	241,668	97%	98%	98%
Gross*	41,811	29,811	13,046	44%	49%	84%
Ralston	10,776	7,276	6,659	92%	80%	87%
Meadow Creek	5,370	4,520	2,982	66%	69%	76%
Total	567,906	520,323	482,496	93%	94%	92%

*Gross Reservoir storage is limited to 29,938 acre feet in total storage during construction activities. The percent full figures are based on the normal usable capacity of 29,811 acre feet.

Daily Use

Supply Reservoir Contents

Note: Denver Water forecasts seasonal reservoir storage contents under dry future weather, normal future weather and wet future weather scenarios.

Gross Reservoir storage is limited to 29,938 acre feet in total storage during construction activities. The percent full figures are based on the normal usable capacity of 29,811 acre feet.

August Precipitation

Cumulative Precipitation: South Platte River

Cumulative Precipitation: Colorado River

2024 Water Use and Weather Conditions

August 26, 2024

Denver Water Use and Reservoir Contents 2024

	Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec	YTD-Avg
Predicted End-of-Month Supply Reservoir Contents (Full = 520,323 AF)	491,400												
Actual End-of-Month Supply Reservoir Contents (AF)	437,644	433,227	435,044	450,216	470,851	509,386	493,520

Notes: 1) "AF" denotes acre-feet. "MG" denotes million gallons. 2) Expected Daily Use is based on historical use with normal weather conditions. 3) The predicted end-of-month supply reservoir contents figures assume normal weather after August 5th, 2024. 4) The differences between predicted and actual end-of-month supply reservoir contents are the result of normal estimation error of daily use, supply, evaporation, carriage losses and raw water deliveries. 5) Predicted supply reservoir contents last updated on August 5th, 2024. 6) Daily water figures are subject to change.

Lake Powell Report*

* Denver Water gets half of its water supply from the Colorado River and closely monitors conditions at Lake Powell and within the greater Colorado River Basin.
