

WATER WATCH REPORT

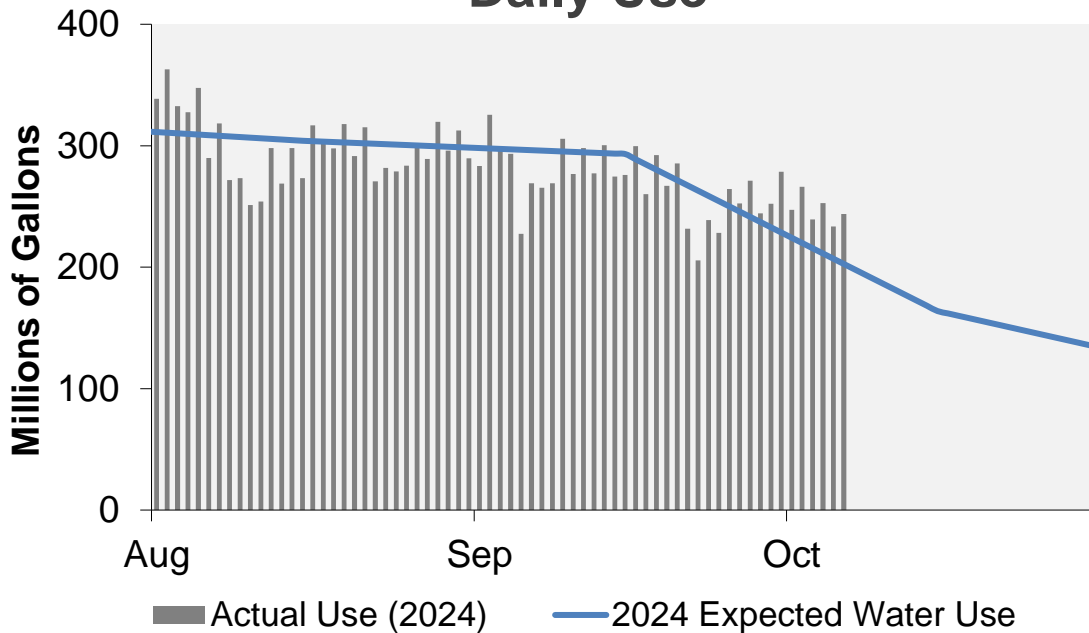

October 7, 2024

Supply Reservoir Contents

Reservoir	Capacity		Current Usable Contents (acre-feet)	Percent Full		
	(acre-feet)			Current	Last	Historical
	Total	Usable	Year		Median	
Antero	20,122	20,067	17,338	86%	97%	99%
Eleven Mile	97,779	97,779	100,140	102%	101%	102%
Cheesman	79,064	79,064	71,069	90%	94%	85%
Marston	19,108	13,133	11,098	85%	77%	46%
Strontia Springs	7,863	7,163	6,376	89%	90%	93%
Chatfield	28,709	12,415	5,523	44%	75%	49%
Dillon	257,304	249,095	218,861	88%	91%	96%
Gross*	41,811	29,811	12,249	41%	48%	77%
Ralston	10,776	7,276	6,375	88%	61%	68%
Meadow Creek	5,370	4,520	26	1%	4%	39%
Total	567,906	520,323	449,055	86%	89%	87%

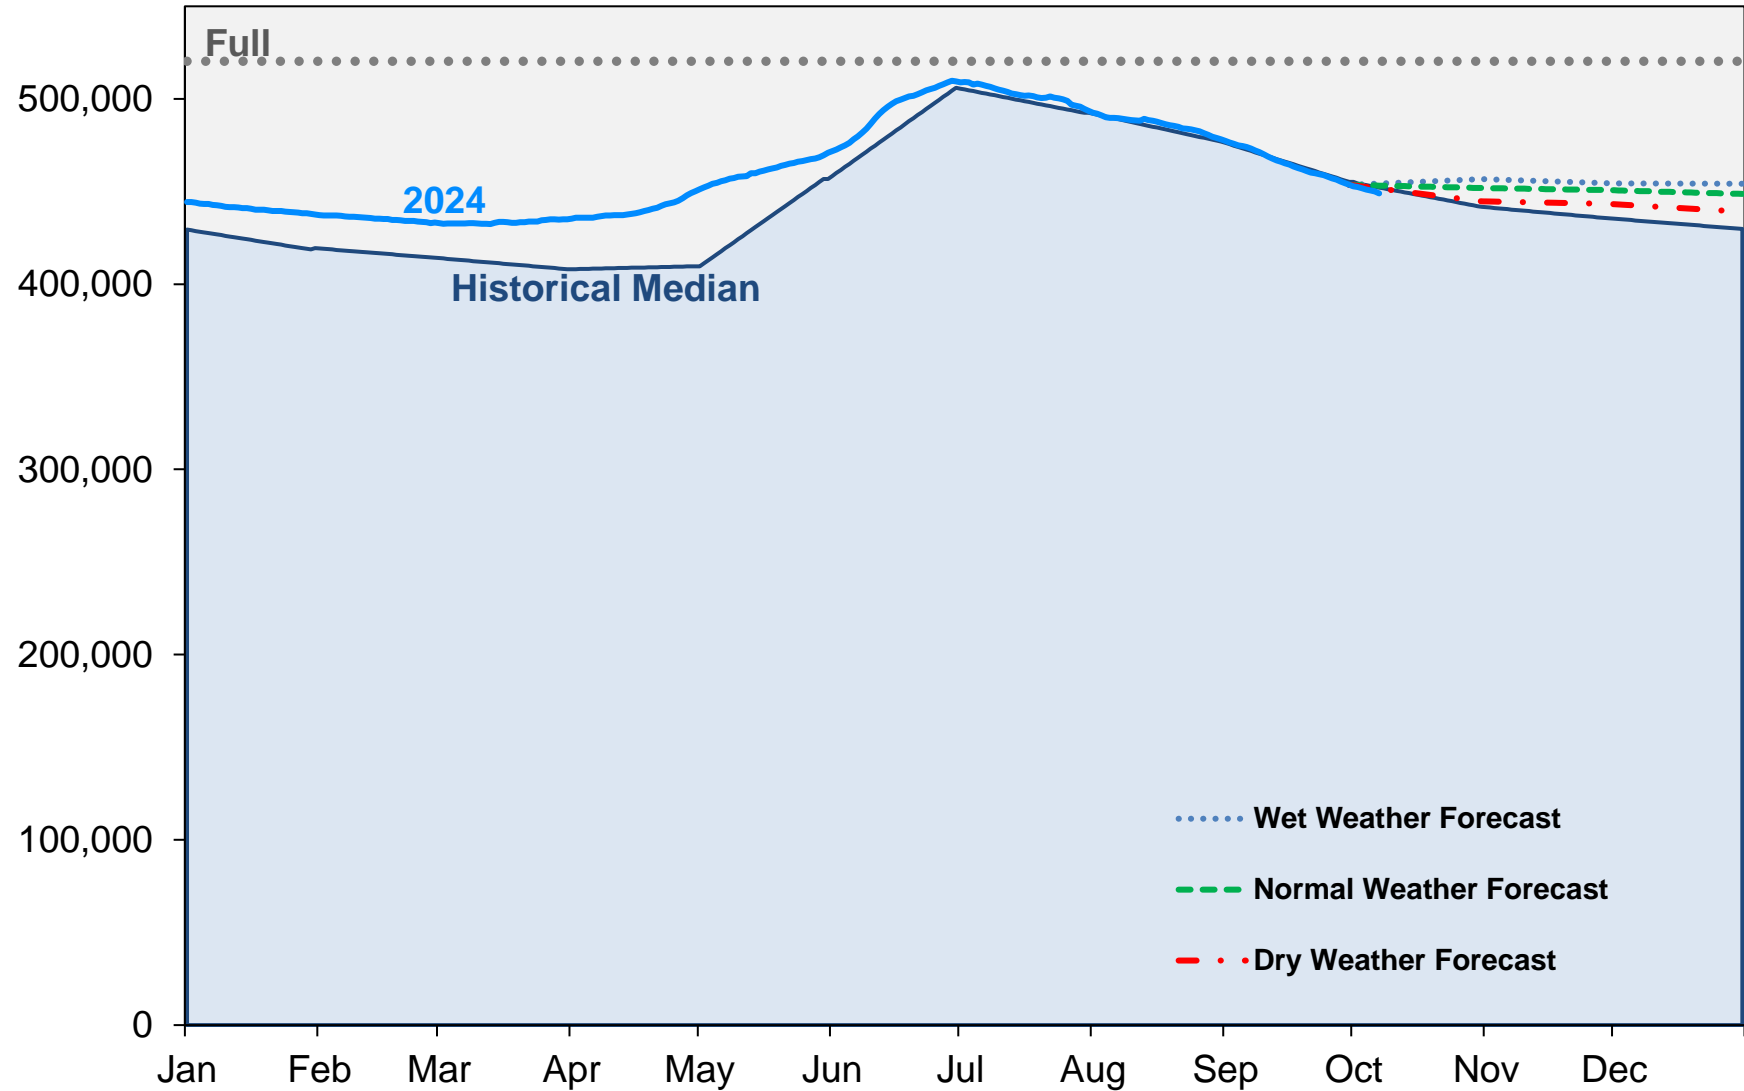

*Gross Reservoir storage is limited to 29,938 acre feet in total storage during construction activities. The percent full figures are based on the normal usable capacity of 29,811 acre feet.

Daily Use

Supply Reservoir Contents

Acre-Feet

Note: Denver Water forecasts seasonal reservoir storage contents under dry future weather, normal future weather and wet future weather scenarios.

Gross Reservoir storage is limited to 29,938 acre feet in total storage during construction activities. The percent full figures are based on the normal usable capacity of 29,811 acre feet.

October Precipitation

Cumulative Precipitation: South Platte River

Cumulative Precipitation: Colorado River

2024 Water Use and Weather Conditions

October 7, 2024

Denver Water Use and Reservoir Contents 2024

	Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec	YTD-Avg
Predicted End-of-Month Supply Reservoir Contents (Full = 520,323 AF)	452,400												
Actual End-of-Month Supply Reservoir Contents (AF)	437,644	433,227	435,044	450,216	470,851	509,386	493,520	475,699	453,607

Notes: 1) "AF" denotes acre-feet. "MG" denotes million gallons. 2) Expected Daily Use is based on historical use with normal weather conditions. 3) The predicted end-of-month supply reservoir contents figures assume normal weather after September 30th, 2024. 4) The differences between predicted and actual end-of-month supply reservoir contents are the result of normal estimation error of daily use, supply, evaporation, carriage losses and raw water deliveries. 5) Predicted supply reservoir contents last updated on September 30, 2024. 6) Daily water figures are subject to change.

Lake Powell Report*

* Denver Water gets half of its water supply from the Colorado River and closely monitors conditions at Lake Powell and within the greater Colorado River Basin.
